## Manuscript details

|                                                                             |                                                      |
|-----------------------------------------------------------------------------|------------------------------------------------------|
| Article type                                                                | Original research paper                              |
| Word count, body text (excluding abstract, captions, tables and references) | 5,971                                                |
| Abstract word count                                                         | 246                                                  |
| Number of references                                                        | 50                                                   |
| Figures                                                                     | 8 in the manuscript, 6 in the supplementary material |
| Tables                                                                      | 6 in the manuscript, 8 in the supplementary material |

## Keywords

Power system expansion planning; System dynamics; Transmission expansion; Uncertainty analysis; Latin hypercube sampling; Peru

## Declaration of competing interest

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

## Funding

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

**Data availability**

The Vensim model, the input workbook, the experimental design, the simulation driver, the analysis code and a commented notebook that regenerates every figure are openly available at <https://github.com/sebastianzapatar/modeloperu>. Nothing required to reproduce the results is available only on request.

**Declaration of generative AI and AI-assisted technologies in the manuscript preparation process**

During the preparation of this work the authors used Claude (Anthropic) in order to draft and edit sections of the manuscript, to structure the experimental design and analysis code, and to prepare figures and tables from the simulation output. After using this tool, the authors reviewed and edited the content as needed and take full responsibility for the content of the publication.
