Manuscript details

Article type	Original research paper
Word count, body text (excluding abstract, captions, tables and references)	5,996
Abstract word count	246
Number of references	50
Figures	8 in the manuscript, 6 in the supplementary material
Tables	6 in the manuscript, 8 in the supplementary material

Keywords

Power system expansion planning; System dynamics; Transmission expansion; Uncertainty analysis; Latin hypercube sampling; Peru

Declaration of competing interest

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

Funding

[Funding statement to be completed by the team.]

Data availability

The Vensim model, the input workbook, the experimental design, the simulation driver, the analysis code and a commented notebook that regenerates every figure are openly available at <https://github.com/sebastianzapatar/modeloperu>. **[Add the archived release DOI before submission.]** Nothing required to reproduce the results is available only on request.

Declaration of generative AI and AI-assisted technologies in the manuscript preparation process

During the preparation of this work the authors used Claude (Anthropic) in order to draft and edit sections of the manuscript, to structure the experimental design and analysis code, and to prepare figures and tables from the simulation output. After using this tool, the authors reviewed and edited the content as needed and take full responsibility for the content of the publication.
